In a domestic environment this product may cause radio interference in which case the user may be required to take immediate measures. This equipment complies with the essential requirements of the EU Directive 2014/30/EU. Declarations are available from your local representative.
EU RoHS	Compliant to the most recent applicable directive.
FCC	FCC Part 15, Class A This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

This table is prepared in accordance with the provisions of SJ/T 11364.
这个标签是根据 SJ/T 11364 的规定准备的。

O: Indicates that said hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement of GB / T26572 - 2011.

表示本部件所有均质材料中含有的有害物质低于 GB / T26572 - 2011 的限量要求。

X: Indicates that said hazardous substance contained in at least one of the homogeneous materials used for this part is above the limit requirement of GB / T26572 - 2011.

表示用于本部件的至少一种均质材料中所含的危害物质超过 GB / T26572 - 2011 的限制要求。

For European Community Users

Cognex complies with Directive 2012/19/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 4 July 2012 on waste electrical and electronic equipment (WEEE).

This product has required the extraction and use of natural resources for its production. It may contain hazardous substances that could impact health and the environment, if not properly disposed.

In order to avoid the dissemination of those substances in our environment and to diminish the pressure on the natural resources, we encourage you to use the appropriate take-back systems for product disposal. Those systems will reuse or recycle most of the materials of the product you are disposing in a sound way.

The crossed out wheeled bin symbol informs you that the product should not be disposed of along with municipal waste and invites you to use the appropriate separate take-back systems for product disposal.

If you need more information on the collection, reuse, and recycling systems, please contact your local or regional waste administration.

You may also contact your supplier for more information on the environmental performance of this product.

Precautions

To reduce the risk of injury or equipment damage when you install the Cognex product, observe the following precautions:

- The vision system requires a UL or NRTL listed power supply with a 24VDC output and meets the following rating requirements:
 - At least 2A continuous current.
 - A maximum short circuit current of less than 8A.
 - A maximum power of less than 100VA and marked as a Limited Power Source (LPS) or National Electrical Code (NEC) Class 2.

Any other voltage creates a risk of fire or shock and can damage the components. Applicable national and local wiring standards and rules must be followed.

- This product is intended for industrial use in automated manufacturing or similar applications.
- The safety of any system incorporating this product is the responsibility of the assembler of the system.
- Do not install Cognex products where they are exposed to environmental hazards such as excessive heat, dust, moisture, humidity, impact, vibration, corrosive substances, flammable substances, or static electricity.
- Route cables and wires away from high-current wiring or high-voltage power sources to reduce the risk of damage or malfunction from the following causes: over-voltage, line noise, electrostatic discharge (ESD), power surges, or other irregularities in the power supply.
- Do not expose the image sensor to laser light. Image sensors can be damaged by direct, or reflected, laser light. If your application requires laser light that might strike the image sensor, use a lens filter at the corresponding laser wavelength. For suggestions, contact your local integrator or application engineer.
- This product does not contain user-serviceable parts. Do not make electrical or mechanical modifications to product components. Unauthorized modifications can void your warranty.
- Changes or modifications not expressly approved by the party responsible for regulatory compliance could void the user's authority to operate the equipment.
- Include service loops with cable connections.
- Ensure that the cable bend radius begins at least six inches from the connector. Cable shielding can be degraded or cables can be damaged or wear out faster if a service loop or bend radius is tighter than 10X the cable diameter.
- This device should be used in accordance with the instructions in this manual.
- All specifications are for reference purposes only and can change without notice.

Symbols

The following symbols indicate safety precautions and supplemental information:

 **WARNING:** This symbol indicates a hazard that could cause death, serious personal injury or electrical shock.

 **CAUTION:** This symbol indicates a hazard that could result in property damage.

 **Note:** This symbol indicates additional information about a subject.

 **Tip:** This symbol indicates suggestions and shortcuts that might not otherwise be apparent.

Introduction

The In-Sight[®] vision system is a compact, network-ready, stand-alone machine vision system used for automated inspection, measurement, identification and robot guidance applications on the factory floor. All models can be easily configured remotely over a network using an intuitive user interface.

Support

Many information resources are available to help you use the vision system:

- The *In-Sight[®] Explorer Help* and *EasyBuilder Help* files, provided with In-Sight Explorer software.
- On-demand training: cognex.com/on-demand-training.aspx.
- The In-Sight online support site: cognex.com/support/insight.

Standard Components

Note:

- Cables are sold separately.
- If a standard component is missing or damaged, immediately contact your Cognex Authorized Service Provider (ASP) or Cognex Technical Support.

Component	Description
Vision System	Provides image acquisition, vision processing, job storage, Ethernet connectivity and discrete I/O. The vision system has an 8GB SD card pre-installed.

Accessories

You can purchase the following components separately. For a list of options and accessories, contact your local Cognex sales representative.

In-Sight Lenses, Lights and Covers

The following In-Sight lenses, lights and covers are supported with the vision system.

C-Mount Standard and Extended Covers

Note:

- When using a C-Mount lens, the following restrictions apply:
 - Maximum thread length is 5.25mm.
 - The C-Mount lens threads and body cannot protrude more than 6.5mm in length into the vision system when screwed in unless the diameter of the back lens is smaller than 14.75mm. If the C-Mount lens threads and body protrude more than 6.5mm, you can add a spacer between the lens and vision system. However, the spacer decreases the working distance.
- Refer to [C-Mount Lens Clearance Dimensions on page 104](#) for more information.

CAUTION: If installing a C-Mount cover, the illumination accessory (ISLM-7000-WHI) PCB should not be installed to the vision system. Refer to [Remove the Illumination Accessory PCB on page 67](#) for steps to safely remove the PCB and avoid damage to the vision system.

C-Mount Standard and Extended Covers	Part Number	
Standard C-Mount cover and adapter. Note: If using the COV-7000-CMNT cover, the maximum lens length is 41mm, the maximum lens body diameter is 36.5mm and the maximum diameter including locking screws is 47mm.	COV-7000-CMNT	
Extended C-Mount cover and adapter. Note: If using the COV-7000-CMNT-EX extended cover, the maximum lens length is 62mm, the maximum lens body diameter is 36.5mm and the maximum diameter including locking screws is 46.5mm.	COV-7000-CMNT-EX	
Large C-Mount cover and adapter. This accessory is only supported with the In-Sight 7902P and 7905 vision system. Note: If using the COV-7000-CMNT-LG cover, the maximum lens length is 77mm, the maximum lens body diameter is 55mm and the maximum diameter including locking screws is 55mm.	COV-7000-CMNT-LG	
30mm C-Mount cover extender. This accessory is only supported with the In-Sight 7902P and 7905 vision system.	COV-7000-CMNT-LGX	

C-Mount Standard and Extended Covers	Part Number	
<p>Metal C-Mount lens cover adapter. Compatible with the following In-Sight 5000 series metal C-Mount lens covers:</p> <ul style="list-style-type: none">• LNS-CVR-EXT01• LNS-CVR-R-00• LNS-CVR-UV-00• LNS-CVR50-AL-2	ADPT-MTL-M55	

C-Mount Illumination Accessories

Note:

- When using a C-Mount lens, the following restrictions apply:
 - Maximum thread length is 5.25mm.

- The C-Mount lens threads and body cannot protrude more than 6.5mm in length into the vision system when screwed in unless the diameter of the back lens is smaller than 14.75mm. If the C-Mount lens threads and body protrude more than 6.5mm, you can add a spacer between the lens and vision system. However, the spacer decreases the working distance.

CAUTION: The following C-Mount lenses are supported with vision systems with a 1/1.8-inch image sensor and using the illumination accessory (ISLM-7000-xx). If using a different C-Mount lens with the illumination accessory, it must be 29.5mm in diameter or smaller. Maximum lens length is 38.5mm without a bandpass filter and 36mm with a bandpass filter. Larger lenses will irretrievably damage the vision system.

C-Mount Illumination Accessories	Part Number	
9mm F1.4 aperture lens	LFC-9F1B	
12.5mm F1.4 aperture lens	LFC-12.5F	
16mm F1.4 aperture lens	LFC-16F1	
25mm F1.4 aperture lens	LFC-25F1	
35mm F1.6 aperture lens	LFC-35F1	
50mm F1.4 aperture lens	LFC-50F1	
Illumination accessory with white LED ring light, cover and hex wrench	ISLM-7000-WHI	
Illumination accessory with cover and hex wrench. Does not include an LED ring light.	ISLM-7000-00	
Diffuse cover	COV-7000-DF	
Clear cover	COV-7000-CLR	
Polarized cover	COV-7000-PL-FULL	
Note: When installing the cover, pull the red tab to remove the protective film.		

C-Mount Illumination Accessories	Part Number	
Red LED ring light	ISL-7000-RD	
IR LED ring light	ISL-7000-IR	
Blue LED ring light	ISL-7000-BL	
White LED ring light	ISL-7000-WHI	
 Note: For color vision systems, the white LED ring light should be used.		
Red bandpass filter used with the ISL-7000-RD LED ring light	ISF-7000-RDBP605	
IR bandpass filter used with the ISL-7000-IR LED ring light	ISF-7000-IRBP815	
Blue bandpass filter used with the ISL-7000-BL LED ring light	ISF-7000-BLBP435	

S-Mount/M12 Autofocus Accessories

Note: The In-Sight 7905 vision system does not support the ISAF-7000-8mm autofocus module or any accessories that require S-Mount/M12 lenses.

S-Mount/M12 Autofocus Accessories	Part Number	
Autofocus module with 8mm lens	ISAF-7000-8mm	
Lens removal tool with replacement lens nuts	ISAF-7000-TOOL	
6mm M12 lens	LM12-06-01	
8mm M12 lens	LM12-08-01-F2.2	
12mm M12 lens	LM12-12-01-F2.3	
16mm M12 lens	LM12-16-01	
25mm M12 lens	LM12-25-01	
Illumination accessory with white LED ring light, cover and hex wrench	ISLM-7000-WHI	
Illumination accessory with cover and hex wrench. Does not include an LED ring light.	ISLM-7000-00	
Diffuse cover	COV-7000-DF	
Clear cover	COV-7000-CLR	
Polarized cover	COV-7000-PL-FULL	
Note: When installing the cover, pull the red tab to remove the protective film.		
Red LED ring light	ISL-7000-RD	
IR LED ring light	ISL-7000-IR	
Blue LED ring light	ISL-7000-BL	
White LED ring light	ISL-7000-WHI	
Note: For color vision systems, the white LED ring light should be used.		

S-Mount/M12 Autofocus Accessories	Part Number	
Red bandpass filter used with the ISL-7000-RD LED ring light	ISF-7000-RDBP605	
IR bandpass filter used with the ISL-7000-IR LED ring light	ISF-7000-IRBP815	
Blue bandpass filter used with the ISL-7000-BL LED ring light	ISF-7000-BLBP435	

S-Mount/M12 Manual Focus Accessories

Note:

- The In-Sight 7905 vision system does not support S-Mount/M12 lenses or any accessories that require S-Mount/M12 lenses.
- The DataMan clear cover accessory (DM300-CLCOV) is supported with In-Sight S-Mount/M12 manual focus lenses and provides an IP65 rating. For more information, refer to [DataMan Lenses, Lights and Covers on page 17](#).
- The following S-Mount/M12 lenses are supported. If a different lens is used, the following restrictions apply:
 - At infinity focus, the back focal length must be greater than 5.5mm.
 - Close up, the back focal length of the lens cannot be greater than 13mm.

S-Mount/M12 Manual Focus Accessories	Part Number	
6mm M12 lens	LM12-06-01	
8mm M12 lens	LM12-08-01-F2.2	
12mm M12 lens	LM12-12-01-F2.3	
16mm M12 lens	LM12-16-01	
25mm M12 lens	LM12-25-01	
S-Mount/M12 adapter kit: <ul style="list-style-type: none"> • S-Mount/M12 adapter • 13mm lens locking cone (P/N 1000000178) • 14mm lens locking cone (P/N 372-1270R) • Installation tool 	ISLN-7000-SMNT	
Note: The S-Mount accessory kit (ISLN-7000-SMNT) is required when installing In-Sight S-Mount/M12 manual focus lenses.		

DataMan Lenses, Lights and Covers

The following DataMan accessories are also supported with the In-Sight vision system for S-Mount/M12 manual focus lens configurations. DataMan lenses are only supported with DataMan lights and covers.

Note:

- The In-Sight 7905 vision system does not support S-Mount/M12 lenses or any accessories that require S-Mount/M12 lenses.
- ⓘ
- The following S-Mount/M12 lenses are supported. If a different lens is used, the following restrictions apply:
 - At infinity focus, the back focal length must be greater than 5.5 mm.
 - Close up, the back focal length of the lens cannot be greater than 10 mm.

DataMan Lenses, Lights and Covers	Part Number	
10.3mm M12 lens with locking (DM300-LENS-10) and 10.3 mm IR M12 lens with locking	DM300-LENS-10-IR	
16mm M12 lens with locking	DM300-LENS-16	
25mm M12 lens with lens spacer and hex wrench (also requires Extension kit)	DM300-LENS-25	
Extension kit	DM300-EXT	
Clear cover	DM300-CLCOV	
Clear cover with white LED illumination	DM300-CLCOV-WHI	
Diffuse cover with red LED illumination	DM300-DLCOV-RE	
Diffuse cover with blue LED illumination	DM300-DLCOV-BL	
Diffuse cover with IR LED illumination	DM300-DLCOV-IR	
Polarized cover with red LED illumination	DM300-PLCOV-RE	

DataMan Lenses, Lights and Covers	Part Number	
Diffuse cover, red illumination (assembled), ESD safe	DM300-DLCOV-RE-ESD	
Polarized red LED high-powered integrated light, ESD safe	DM360-HPIL-RE-P	
Non-polarized red LED high-powered integrated light	DM360-HPIL-RE	

High-Power Illumination

Note: The following External Light Cables are supported with the Cognex high-power lights: IVSL-5PM12-J300, IVSL-5PM12-J500, IVSL-5PM12-J1000 and IVSL-5PM12-J2000.

High-Power Illumination	Part Number	
Red narrow	DM30X-HPIA3-625	
Red wide	DM30X-HPIA3-625-W	
White narrow	DM30X-HPIA3-WHI	
White wide	DM30X-HPIA3-WHI-W	
Blue narrow	DM30X-HPIA3-470	
Blue wide	DM30X-HPIA3-470-W	
Infrared narrow	DM30X-HPIA3-IR	
Infrared wide	DM30X-HPIA3-IR-W	

External Lights

External lights can be connected to the vision system's LIGHT connector using the External Light cable.

Note:

- The vision system supports using either an external light or the illumination accessory (ISLM-7000-WHI), but does not support using both lighting devices simultaneously.
- If daisy-chaining multiple Cognex IVSL-YLW2X-xxx or IVSL-YLW300-xxx external lights:
 - The lights must be powered externally by a separate power supply.
 - A Cognex control cable (CCB-FOV25-MAL-012) can be used to connect the vision system's LIGHT connector to the external light and a Cognex power cable (IVSL-5PM12-5) can be used to connect the light to the separate power supply. Only the power and ground wires from the Cognex power cable (IVSL-5PM12-5) should be connected to the remote power supply.
- If using a Cognex IVSL-LX520-xxx external light:
 - The lights must be powered externally by a separate power supply.
 - A Cognex control cable (CCB-FOV25-MAL-012) can be used to connect the vision system's LIGHT connector to the external light and a Cognex power cable (IVSL-5PM12-5) can be used to connect the light to the separate power supply. Only the power and ground wires from the Cognex power cable (IVSL-5PM12-5) should be connected to the remote power supply.
 - The following cables must not be used with IVSL-LX520-xxx external lights: IVSL-5PM12-J300, IVSL-5PM12-J500 and IVS-5PM12-J1000, IVSL-5PM12-J2000.
- The vision system supports Cognex IVSL-YL300-xx external lights with the following External Light cables: IVSL-M12-NSB-300, IVSL-M12-NSB-1000 and IVSL-M12-NSB-2000.

External Lights	Part Number	Supported External Light Cables	
Ring light	CLRR-R7030G1CLR	CCB-M12LTF-xx	
Back light	CLRB-F100100G1	CCB-M12LTF-xx	
Coaxial Dual on Access Light (DOAL)	CLRO-K5050G1	CCB-M12LTF-xx	
Spot light	CLRS-P14G1	CCB-M12LTF-xx	
Dark-field light	CLRD-D120G1	CCB-M12LTF-xx	

External Lights	Part Number	Supported External Light Cables

Cables

Note: When using the 15 meter Breakout cable, full 24VDC voltage must be maintained at the input leads of the Breakout cable when the vision system is operating.

Cables	Part Number	
Breakout Cable, M12-12 to Flying Lead	CCB-PWRIO- xx (straight, xx specifies length: 5m, 10m, 15m)	
Breakout Cable, M12-12 to Flying Lead	CCB-PWRIO-xxR (right-angled, xx specifies length: 5m, 10m, 15m)	
Ethernet Cable, X-coded M12-8 to RJ-45	CCB-84901-2001-xx (straight, xx specifies length: 2m, 5m, 10m, 15m, 30m)	
Ethernet Cable, X-coded M12-8 to RJ-45	CCB-84901-2002 (right-angled, xx specifies length: 2m, 5m, 10m)	
External Light Cable, Grey	CCB-M12LTF-xx (xx specifies length: 0.5m, 1m, 2m, 5m)	
Note: The External Light cable CCB-M12LTF-xx does not support intensity control.		
External Light Cable, Yellow	IVSL-5PM12-J300 IVSL-5PM12-J500 IVSL-5PM12-J1000 IVSL-5PM12-J2000	
External Light Cable, Black	IVSL-M12-NSB-300 IVSL-M12-NSB-1000 IVSL-M12-NSB-2000	
Note: This cable is used with standard SVL lights.		
I/O Module Cable M12-12 to DB15	CCB-PWRIO-MOD-xx (xx specifies length: 2m, 5m)	

Mounting Brackets

Mounting Brackets	Part Number	
Mounting bracket with M3x4 socket head screws and hex wrench. Also has 1/4 - 20, M6 and flathead mounting holes. Mounting holes compatible with the In-Sight 7000 series vision system.	ISB-7000-7K	
Mounting bracket with Phillips flat head M3 screws and M4x4 screws. Mounting holes compatible with the In-Sight 5000 series vision system.	ISB-7000-5K	

I/O Modules

I/O Modules	Part Number	
In-Sight CIO-MICRO I/O Module	CIO-MICRO-00	
In-Sight 1400 I/O Expansion Module	CIO-1400	

Connectors and Indicators

Connector	Function
PWR Connector	Connects the Breakout cable, which provides connections to an external power supply, the acquisition trigger input, general-purpose inputs, high-speed outputs and RS-232 serial communications. For more information, refer to Breakout Cable on page 90 . Alternately, this connector is used to attach the I/O Module cable to a compatible In-Sight I/O module, which adds general-purpose discrete I/O. For more information, refer to I/O Module Cable on page 91 .
LIGHT Connector	Connects the vision system to an external lighting device. For more information, refer to External Light Connector on page 88 .
ENET Connector	Connects the Ethernet cable, which provides 10/100/1000 Ethernet connectivity. For more information, refer to Ethernet Cable on page 89 .

Indicator	Function
	Focus Metric LEDs Indicates the image focus score (0 - 10) while in Live Video Mode within In-Sight Explorer.
	TRIG Button Manually triggers an image acquisition when the vision system is either: <ul style="list-style-type: none"> • Online within In-Sight Explorer and the acquisition Trigger parameter is set to Manual. • Offline within In-Sight Explorer.
	Power LED The green LED illuminates to indicate that the vision system is powered on.
	SD Card Status LED <ul style="list-style-type: none"> • Off: The SD card is not inserted. • Green: The SD card is present, and it is safe to remove the SD card after removing power from the vision system. • Yellow: The SD card is present, but it is not safe to remove it.
	Pass/Fail LED and Indicator Ring Green or red when active. User configurable.
	Network LED The yellow LED flashes to indicate network activity.
	Error LED Red when active. User configurable.
	TUNE Button Used as an Event Trigger within In-Sight Explorer to force a cell containing an Event structure to run when the TUNE button is pressed.

Installation

Read this section to learn how the vision system connects to its standard components and accessories. For a list of options and accessories, contact your Cognex sales representative.

Note: Cables are sold separately.

CAUTION: All cable connectors are keyed to fit the connectors on the vision system. Do not force the connections or damage may occur.

Install the Lens, Lighting and Cover

You can choose between a variety of different C-Mount and S-Mount/M12 lenses and covers to install to the vision system. Refer to [In-Sight Lenses, Lights and Covers on page 10](#) and [DataMan Lenses, Lights and Covers on page 17](#) for a complete list of options and accessories.

Install the C-Mount Lens and Cover (COV-7000-CMNT or COV-7000-CMNT-EX)

Complete the following steps to install a C-Mount lens and cover to the vision system. The C-Mount covers (COV-7000-CMNT or COV-7000-CMNT-EX) are optional accessories and required for IP67 protection.

Note:

- When using a C-Mount lens, the following restrictions apply:
 - Maximum thread length is 5.25mm.
 - The C-Mount lens threads and body cannot protrude more than 6.5mm in length into the vision system when screwed in unless the diameter of the back lens is smaller than 14.75mm. If the C-Mount lens threads and body protrude more than 6.5mm, you can add a spacer between the lens and vision system. However, the spacer decreases the working distance.
- If using the COV-7000-CMNT cover, the maximum lens length is 41mm, the maximum lens body diameter is 36.5mm and the maximum diameter including locking screws is 47mm.
- If using the COV-7000-CMNT-EX extended cover, the maximum lens length is 62mm, the maximum lens body diameter is 36.5mm and the maximum diameter including locking screws is 46.5mm.

CAUTION: If installing a C-Mount cover, the illumination accessory (ISLM-7000-WHI) PCB should not be installed to the vision system. Refer to [Remove the Illumination Accessory PCB on page 67](#) for steps to safely remove the PCB and avoid damage to the vision system.

1. Remove the rubber faceplate covering the image sensor window, if present.
2. Remove the protective film covering the threaded lens opening, if present.
3. Place the adapter on the faceplate of the vision system. Insert the four adapter screws and tighten; the maximum torque is 0.90 Nm (8 in-lb).
4. Thread the lens into the vision system.

5. Attach the cover to the vision system. Rotate the cover clockwise approximately seven degrees to lock it.

Install the C-Mount Lens and Cover (COV-7000-CMNT-LG)

Complete the following steps to install a C-Mount lens and cover to the In-Sight 7902P or 7905 vision system. The C-Mount cover (COV-7000-CMNT-LG) is an optional accessory and required for IP67 protection.

Note:

- When using a C-Mount lens, the following restrictions apply:
 - Maximum thread length is 5.25mm.
 - The C-Mount lens threads and body cannot protrude more than 6.5mm in length into the vision system when screwed in unless the diameter of the back lens is smaller than 14.75mm. If the C-Mount lens threads and body protrude more than 6.5mm, you can add a spacer between the lens and vision system. However, the spacer decreases the working distance.
- If using the COV-7000-CMNT-LG cover, the maximum lens length is 77mm, the maximum lens body diameter is 55mm and the maximum diameter including locking screws is 55mm.

CAUTION: If installing a C-Mount cover, the illumination accessory (ISLM-7000-WHI) PCB should not be installed to the vision system. Refer to [Remove the Illumination Accessory PCB on page 67](#) for steps to safely remove the PCB and avoid damage to the vision system.

1. Remove the rubber faceplate covering the image sensor window, if present.
2. Remove the protective film covering the threaded lens opening, if present.
3. Place the adapter on the faceplate of the vision system. Insert the four adapter screws and tighten; the maximum torque is 0.90 Nm (8 in-lb).
4. Thread the lens into the vision system.
5. (Optional) For longer lenses, the C-Mount cover extender accessory (COV-7000-CMNT-LGX) can be used to add 30mm in length to the C-Mount cover. If using the cover extender, attach it to the vision system and rotate the cover extender clockwise approximately thirteen degrees to lock it.
6. Attach the cover to the vision system. Rotate the cover clockwise approximately thirteen degrees to lock it.

Install the C-Mount Lens and Illumination

Complete the following steps to install a C-Mount lens and the illumination accessory (ISLM-7000-WHI). The illumination accessory (ISLM-7000-WHI) is an optional accessory and required for IP67 protection.

CAUTION:

- Refer to [C-Mount Illumination Accessories on page 12](#) for lenses supported with the illumination accessory (ISLM-7000-WHI). If using a different C-Mount lens with the illumination accessory, it must be 29.5mm in diameter or smaller. Maximum lens length is 38.5mm without a bandpass filter and 36mm with a bandpass filter. Larger lenses will irretrievably damage the vision system.
- Do not hot-plug the illumination accessory. Verify the vision system is not receiving power when connecting or disconnecting the illumination accessory. Failure to remove power during this procedure may result in damage to the vision system and/or the illumination accessory.
- The vision system should be grounded, either by mounting the vision system to a fixture that is electrically grounded or by attaching a wire from the vision system's mounting fixture to frame ground or Earth ground. If a ground wire is used, it should be attached to one of the four mounting points on the back plate of the vision system and not to the mounting points on the front of the vision system.
- Tighten all illumination accessory screws in the following sequence.

1. Remove the rubber faceplate covering the image sensor window, if present.
2. Remove the protective film covering the threaded lens opening, if present.
3. Plug the PCB into the lighting connector on the vision system faceplate.

CAUTION: If uninstalling the PCB from the vision system, refer to [Remove the Illumination Accessory PCB on page 67](#) for steps to safely remove the PCB and avoid damage to the vision system.

4. Install the spacer.
 - a. Place the spacer on top of the vision system with “TOP” oriented upward.
 - b. Verify seating of the gasket on the bottom of the spacer.
 - c. Insert the four M3 screws and use a 2mm hex wrench to torque screws to 0.34 Nm (3 in-lb). For the 7500, 7501, 7600, 7800, 7801, 7802, 7900, 7901 and 7902, use the M3 x 6mm screws. For the 7902P and 7905, use the M3 x 8mm screws.

5. Thread the lens into the vision system. Focusing of the C-Mount lens prior to light housing installation is required.

Note: If installing the autofocus accessory (ISAF-7000-8mm), refer to [Install the Autofocus Lens and Illumination on page 32](#).

6. Install the light housing.

CAUTION:

- Do not hot-plug the LED ring light. Verify the vision system is not receiving power when connecting or disconnecting the LED ring light.
- A connector protrudes from the underside of the light housing. To prevent damage, it is recommended the light housing not be removed from the box until ready to be assembled.

Note: If a different LED color is required, refer to [Replace the LED Ring Light \(Optional\) on page 54](#).

- a. Place the light housing with LED ring light on top of the spacer, with "TOP" oriented upward.
- b. Verify seating of the gasket on the top of the spacer.
- c. There are four captive screw access holes near the white circles on the LED ring light. Use a 2mm hex wrench to torque the captive screws to 0.34 Nm (3 in-lb).

7. Optionally, install a bandpass filter to the light baffle.

Tip: Wear gloves when installing the filter to prevent leaving fingerprints on the surface of the filter.

- a. Insert the filter in the light baffle so that it is held in place between the light baffle's filter retention tabs.

- b. Push the filter down and snap it into place, ensuring the filter retention tabs are flush with the top surface of the filter.

8. Install the light baffle.

- a. Tilt the light baffle toward the light housing and maneuver the light baffle past the top of the LED ring light structure.
- b. Compress the light baffle and maneuver the bottom of the light baffle past the bottom of the LED ring light structure until the light baffle snaps into place, with the keyed tabs sitting flush over each light housing captive screw access hole.

9. Install the cover.

- a. Place the cover on the light housing.
- b. Align the central clear region of the cover with the light baffle edges.
- c. Insert the four M3 x 12mm screws and use a 2mm hex wrench to torque screws to 0.31 Nm (2.75 in-lb).

Install the Autofocus Lens and Illumination

Complete the following steps to install the autofocus accessory (ISAF-7000-8mm) and illumination accessory (ISLM-7000-WHI).

Note:

- The In-Sight 7905 vision system does not support the autofocus accessory.
- The autofocus accessory has an 8mm M12 lens pre-installed. If a different lens is required, it should be installed into the autofocus module before the autofocus module is installed to the vision system. For more information, see [Replace the M12 Autofocus Lens \(Optional\) on page 59](#).
- The illumination accessory (ISLM-7000-WHI) is sold separately. It is the only cover available for the autofocus module and is required for IP67 rating.

CAUTION:

- When installing the illumination accessory (ISLM-7000-WHI):
 - Do not hot-plug the illumination accessory. Verify the vision system is not receiving power when connecting or disconnecting the illumination accessory. Failure to remove power during this procedure may result in damage to the vision system and/or the illumination accessory.
 - The vision system should be grounded, either by mounting the vision system to a fixture that is electrically grounded or by attaching a wire from the vision system's mounting fixture to frame ground or Earth ground. If a ground wire is used, it should be attached to one of the four mounting points on the back plate of the vision system and not to the mounting points on the front of the vision system.
 - Tighten all illumination accessory screws in the following sequence.

1. Remove the rubber faceplate covering the image sensor window, if present.
2. Remove the protective film covering the threaded lens opening, if present.
3. Plug the PCB into the lighting connector on the vision system faceplate.

CAUTION: If uninstalling the PCB from the vision system, refer to [Remove the Illumination Accessory PCB on page 67](#) for steps to safely remove the PCB and avoid damage to the vision system.

4. Install the spacer.

- a. Place the spacer on top of the vision system with "TOP" oriented upward.
- b. Verify seating of the gasket on the bottom of the spacer.
- c. Insert the four M3 screws and use a 2mm hex wrench to torque screws to 0.34 Nm (3 in-lb). For the 7500, 7501, 7600, 7800, 7801, 7802, 7900, 7901 and 7902, use the M3 x 6mm screws. For the 7902P and 7905, use the M3 x 8mm screws.

5. Install the autofocus module.

CAUTION: Do not hot-plug the autofocus module. Verify the vision system is not receiving power when connecting or disconnecting the autofocus module.

Note: If a different lens is required, it should be installed in the autofocus module before the autofocus module is installed to the vision system. For more information, see [Replace the M12 Autofocus Lens \(Optional\) on page 59](#).

- a. There are two alignment pins on the base of the autofocus module. Seat the pins into the vision system faceplate.
- b. There are three captive screws in the autofocus module. Partially thread the screws into the vision system faceplate using a 1.5mm hex wrench.
- c. Once threaded, torque the captive screws to 0.5 Nm (4.43 in-lb) using a torque screwdriver with a 1.5mm hex torque bit capable of reaching 15mm into a 2.5mm diameter hole. For example, Wiha Tools 1.5mm Hex Metric Torque Blade (SKU 28545) used with the Adjustable Torque Handle (SKU 28550).

6. Install the light housing.

CAUTION:

- Do not hot-plug the LED ring light. Verify the vision system is not receiving power when connecting or disconnecting the LED ring light.
- A connector protrudes from the underside of the light housing. To prevent damage, it is recommended the light housing not be removed from the box until ready to be assembled.

Note: If a different LED color is required, refer to [Replace the LED Ring Light \(Optional\) on page 54](#).

- a. Place the light housing with LED ring light on top of the spacer, with "TOP" oriented upward.
- b. Verify seating of the gasket on the top of the spacer.
- c. There are four captive screw access holes near the white circles on the LED ring light. Use a 2mm hex wrench to torque the captive screws to 0.34 Nm (3 in-lb).

7. Optionally, install a bandpass filter to the light baffle.

 **Tip:** Wear gloves when installing the filter to prevent leaving fingerprints on the surface of the filter.

- a. Insert the filter in the light baffle so that it is held in place between the light baffle's filter retention tabs.

- b. Push the filter down and snap it into place, ensuring the filter retention tabs are flush with the top surface of the filter.

8. Install the light baffle.

- a. Tilt the light baffle toward the light housing and maneuver the light baffle past the top of the LED ring light structure.
- b. Compress the light baffle and maneuver the bottom of the light baffle past the bottom of the LED ring light structure until the light baffle snaps into place, with the keyed tabs sitting flush over each light housing captive screw access hole.

9. Install the cover.

- a. Place the cover on the light housing.
- b. Align the central clear region of the cover with the light baffle edges.
- c. Insert the four M3 x 12mm screws and use a 2mm hex wrench to torque screws to 0.31 Nm (2.75 in-lb).

Install the S-Mount/M12 Manual Focus Lens

Complete the following steps to install an In-Sight S-Mount/M12 manual focus lens. The S-Mount accessory kit (ISLN-7000-SMNT) is required when installing In-Sight S-Mount/M12 manual focus lenses.

Note:

- The In-Sight 7905 vision system does not support S-Mount/M12 lenses or any accessories that require S-Mount/M12 lenses.
- The DataMan clear cover accessory (DM300-CLCOV) is supported with In-Sight S-Mount/M12 manual focus lenses and provides an IP65 rating. For more information, refer to [DataMan Lenses, Lights and Covers on page 17](#).

1. Remove the rubber faceplate covering the image sensor window, if present.
2. Remove the protective film covering the threaded lens opening, if present.
3. Place the S-Mount adapter over the image sensor window.

4. Place the "In-Sight" end of the adapter tool on the adapter. Turn clockwise until tight.

5. Remove the adapter tool.

6. Thread the lens into the vision system. Focusing of lens prior to installation of the rubber lens-locking cone is required.

7. Place the 13mm or 14mm rubber lens-locking cone over the M12 lens until it snaps tightly into place around the nose of the lens. When installing, avoid rotating the M12 lens.

8. If using a lens cover accessory, attach the cover to the vision system.

Mount the Vision System

The vision system provides mounting holes for attachment to a mounting surface.

CAUTION: The vision system should be grounded, either by mounting the vision system to a fixture that is electrically grounded or by attaching a wire from the vision system's mounting fixture to frame ground or Earth ground. If a ground wire is used, it should be attached to one of the four mounting points on the back plate of the vision system and not to the mounting points on the front of the vision system.

1. Align the holes on the mounting surface with the mounting holes on the vision system.
2. Insert the M3 screws into the mounting holes and tighten using a 2.5mm hex wrench; the maximum torque is 0.90 Nm (8 in-lb).

Note: The maximum insertion depth of the M3 screws is 3.5mm in the rear housing and 3.75mm in the front housing, plus the thickness of the mounting material used.

Install the Mounting Bracket (ISB-7000-7K)

Complete the following steps to attach the accessory mounting bracket (ISB-7000-7K) to the vision system.

CAUTION:

- The vision system should be grounded, either by mounting the vision system to a fixture that is electrically grounded or by attaching a wire from the vision system's mounting fixture to frame ground or Earth ground. If a ground wire is used, it should be attached to one of the four mounting points on the back plate of the vision system and not to the mounting points on the front of the vision system.
- When mounting the vision system to the mounting bracket, use the M3 screws supplied with the mounting kit. If using the 1/4 - 20 or M6 screw holes on the mounting bracket to secure the vision system to a mounting surface, the insertion depth of the screw should not exceed 7mm. Allowing the mounting screws to bottom in the mounting hole can damage the vision system.

1. Align the mounting bracket with the mounting holes on the vision system.
2. Insert the M3 screws into the mounting holes and tighten using a 2.5mm hex wrench; the maximum torque is 0.90 Nm (8 in-lb).

Install the Mounting Bracket (ISB-7000-5K)

Complete the following steps to attach the accessory mounting bracket (ISB-7000-5K) to the vision system.

CAUTION:

- The vision system should be grounded, either by mounting the vision system to a fixture that is electrically grounded or by attaching a wire from the vision system's mounting fixture to frame ground or Earth ground. If a ground wire is used, it should be attached to one of the four mounting points on the back plate of the vision system and not to the mounting points on the front of the vision system.
- When mounting the vision system to the mounting bracket, use the Phillips head screws supplied with the mounting kit. If using the M4 screw holes on the mounting bracket to secure the vision system to a mounting surface, the insertion depth of the screw should not exceed 4mm. Allowing the mounting screws to bottom in the mounting hole can damage the vision system.

1. Align the mounting bracket with the mounting holes on the vision system.
2. Insert the Phillips flat head screws into the mounting holes and tighten; the maximum torque is 0.56 Nm (5 in-lb).

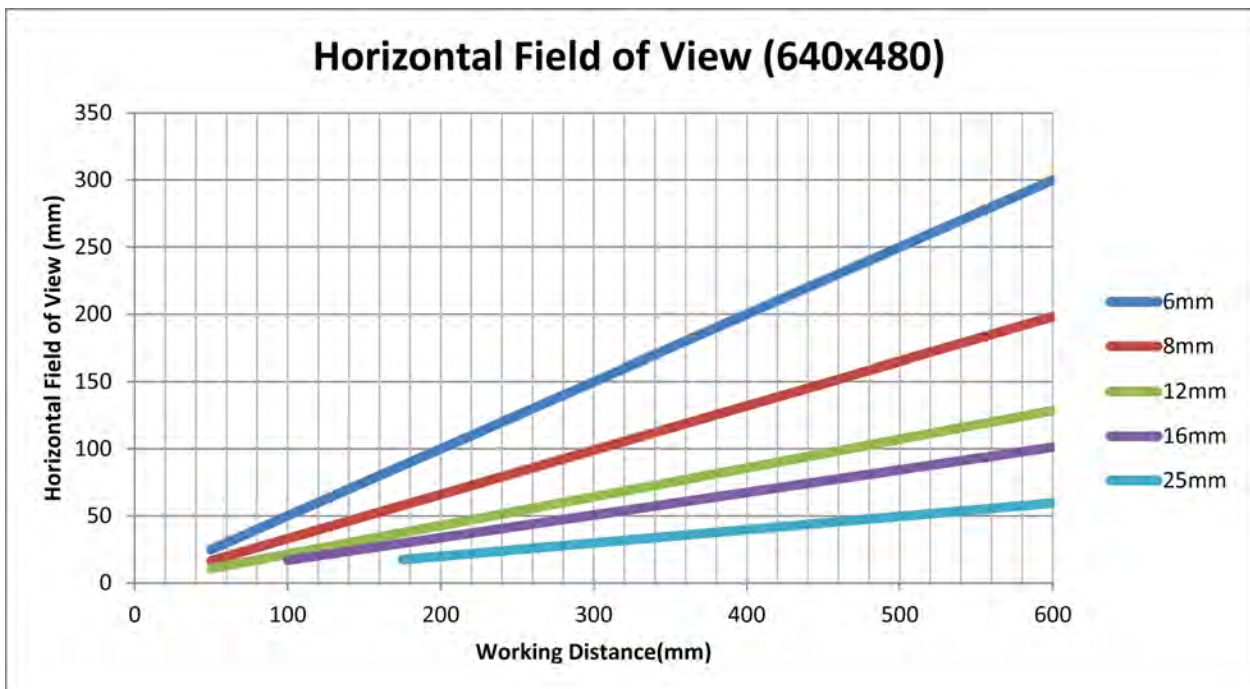

Working Distance and Field of View (S-Mount/M12 Lenses)

The working distance is the distance from the vision system lens to the part that needs to be inspected; field of view is what the vision system can see at that distance. As the working distance increases, so does the size of the field of view.

Note:

- The following charts show the design field of view of the In-Sight S-Mount/M12 accessory lenses and is fully mapped onto the image sensor. Additional field beyond the design field of view may have vignetting. For supported In-Sight lenses, refer to [S-Mount/M12 Autofocus Accessories on page 14](#) and [S-Mount/M12 Manual Focus Accessories on page 16](#).
- For the In-Sight 7902P, the S-Mount lens image circle size is slightly smaller than the vision system's image sensor size, resulting in vignetting in the image. This is most noticeable with the smaller S-Mount 6mm, 8mm and 12mm focal lenses.
- The In-Sight 7905 vision system does not support S-Mount/M12 lenses or any accessories that require S-Mount/M12 lenses.

Horizontal Field of View (800x600)

Horizontal Field of View (1280x1024)

Connect the External Light Cable (Optional)

The vision system's LIGHT connector is used to connect the External Light cable to an external lighting device, providing power and strobe control. The External Light cable can be connected to either a continuous or strobed lighting device. For a list of supported accessories, refer to [External Lights on page 19](#).

1. Remove the protective cap from the LIGHT connector, if present.
2. Connect the External Light cable's M12 connector to the vision system's LIGHT connector. For more information, refer to [External Light Connector on page 88](#).
3. Connect the other end of the Light cable to an external lighting device (for example, a strobe light).

Connect the Ethernet Cable

CAUTION: The Ethernet cable shield must be grounded at the far end. Whatever this cable is plugged into (typically a switch or router) should have a grounded Ethernet connector. A digital voltmeter should be used to validate the grounding. If the far end device is not grounded, a ground wire should be added in compliance with local electrical codes.

1. Connect the Ethernet cable's M12 connector to the vision system ENET connector.
2. Connect the Ethernet cable's RJ-45 connector to a switch/router or PC, as applicable.

Connect the Breakout Cable

⚠ CAUTION: To reduce emissions, connect the far end of the Breakout cable shield to frame ground.

Note:

- Perform wiring or adjustments to I/O devices when the vision system is not receiving power.
- You can cut exposed wires short or trim wire ends. You also can tie the wires back if you use a tie made of non-conductive material. Keep bare wires separated from the +24VDC wire.
- When using the 15 meter Breakout cable, full 24VDC voltage must be maintained at the input leads of the Breakout cable when the vision system is operating.

1. Verify that the 24VDC power supply is unplugged and not receiving power.
2. Optionally, connect the I/O wires to an appropriate device (for example, a PLC or a serial device). For more information, refer to [Breakout Cable on page 90](#).
3. Attach the Breakout cable's +24VDC (Red wire) and GND (Black wire) to the corresponding terminals on the power supply.

⚠ CAUTION: Never connect voltages other than 24VDC. Always observe the polarity shown.

4. Connect the Breakout cable's M12 connector to the vision system PWR connector.

5. Restore power to the 24VDC power supply and turn it on if necessary.

Connect the CIO-MICRO I/O Module (Optional)

The vision system can access the CIO-MICRO I/O module's general-purpose input and output lines via an Ethernet connection to the I/O module. Optionally, the I/O Module cable can be connected to access the I/O module's TRIGGER+, TRIGGER-, HS OUT 0, HS OUT 1 and HS COMMON lines.

Note:

- When the vision system is connected to the I/O Module cable:
 - Illumination accessories attached to the vision system faceplate or LIGHT connector are not supported. If these illumination accessories are attached, the Breakout cable must be used to supply power to the vision system and a connection to the I/O module established via Ethernet only.
 - The vision system's IN 1, IN 2 / HS OUT 2, and IN 3 / HS OUT 3 lines are not supported.
- HS OUT 0 and HS OUT 1 are configurable as NPN (current sinking) or PNP (current sourcing) with 50mA maximum current and the general-purpose outputs are configurable as NPN (current sinking) or PNP (current sourcing) with 100mA maximum current.
- The CIO-MICRO I/O module does not support Gigabit pass-through operation. If you need Gigabit operation, connect a LAN cable from a Gigabit Ethernet switch to the I/O module's LAN port and connect the vision system Ethernet cable to the Gigabit Ethernet switch.
- Perform wiring or adjustments to I/O devices when the vision system is not receiving power.

I/O Port	Connects the I/O module to the vision system using the I/O Module cable, and provides power, trigger and high-speed output signals to the vision system.
MODULE OK LED	Illuminates after the I/O module has powered on, has booted up, and is ready to communicate with the vision system.
COMM OK LED	Blinks continuously until the vision system has established a successful connection to the I/O module from In-Sight software. Once successfully connected and communicating properly, the green LED is constantly illuminated.
PoE STATUS LED	Not supported. When the vision system is connected to the I/O module's PoE port, the POE STATUS LED may blink. This is normal and does not affect operation of the vision system.
PoE Port	Connects the I/O module to the vision system, providing the vision system with Ethernet. The green LED blinks when a network connection to the vision system is detected. The orange LED blinks when network activity is detected.

LAN Port	Connects the I/O module to an Ethernet network. The green LED blinks when a network connection to the local area network is detected. The orange LED blinks when network activity is detected.
Frame Ground Terminal	Connects the I/O module to a frame ground.
RS-232 Port	Connects the I/O module to an external serial device using an RS-232 (DB9) serial cable. Provides RS-232 communications to the vision system.
High-Speed Output Status LEDs (HS OUT 0 and HS OUT 1)	<p>Illuminates to indicate the high-speed output signal for the In-Sight vision system has switched ON. The LEDs illuminate even if the I/O module's high-speed terminals are not connected to anything. In addition, the I/O module displays the last known state of the high-speed output line. Therefore, the LEDs may be illuminated even if the vision system's I/O module cable is disconnected from the I/O module.</p> <p>Note: The I/O module's high-speed output terminals (labeled HS OUT 0 and HS OUT 1) correspond to the vision system's built-in high-speed outputs when connected to the I/O module cable. These signals are considered high-speed because they pass directly through the I/O module without processing, which provides minimal delay.</p>
I/O and Trigger Status LEDs	Illuminates to indicate that an input/output signal has switched ON.
Terminal Blocks	Connects the I/O module to 24VDC power, trigger, external I/O, high-speed outputs and common connections.

1. Connect the I/O module's power wires.

CAUTION: Never connect the I/O module to a power source other than 24VDC. Any other voltage creates a risk of fire or shock and can damage the hardware. Do not connect the 24VDC power source to any terminals other than the 24VDC + and – power terminals.

- a. Verify that the 24VDC power supply is unplugged and not receiving power.
- b. Use a screwdriver to loosen the I/O module's power terminals (labeled 24VDC + and –).
- c. Insert the 24VDC + and – wires (16 - 22 AWG, solid or stranded wire) from the power supply into the 24VDC + and – terminals on the I/O module.
- d. Tighten the screw terminals with the screwdriver to secure the wire leads in the terminal block; the maximum torque is 0.1921 Nm (1.7 in-lb).

2. Connect a frame ground wire to the I/O module's Frame Ground terminal. Connect the other end of the frame ground wire to frame ground.

CAUTION: The shield ground connections of the RS-232 port, LAN port, PoE port, I/O port and Frame Ground terminal are internally connected. The system grounding is at a zero ground potential. This zero-ground potential extends through the cable and to peripheral equipment, such as a vision system or PLC.  To ensure safe operating conditions, check ground connections to ensure that they meet a zero ground potential.

3. Connect the I/O module's I/O wires.
 - a. Determine how I/O devices will be connected to the I/O module's input and output terminals.
 - b. To loosen the appropriate screw terminals, use a screwdriver.
 - c. Connect the input and output wires to the input and output terminals.
 - d. Connect the other end of the input and output wires to the corresponding I/O device.
 - e. Tighten the screw terminals with the screwdriver to secure the wire leads in the terminal block; the maximum torque is 0.1921 Nm (1.7 in-lb).
4. To connect the vision system to a serial device, plug a RS-232 serial cable (DB9 male connector) into the I/O module's RS-232 port and connect the other end of the cable to the serial device. Tighten the connector screws to secure it to the I/O module.
5. Connect to an Ethernet network.
 - a. Connect a LAN cable (RJ-45 connector) to the I/O module's LAN port.
 - b. Connect the other end of the LAN cable to a switch/router or PC, as applicable.
6. Connect the vision system's Ethernet cable.
 - a. Connect the Ethernet cable's M12 connector to the vision system ENET connector.
 - b. Connect the Ethernet cable's RJ-45 connector to the I/O module's PoE port or to a switch/router, as applicable.
7. (Optional) Connect the I/O Module cable (CCB-PWRIO-MOD-xx) to the vision system to gain access to the I/O module's TRIGGER+, TRIGGER-, HS OUT 0, HS OUT 1 and HS COMMON terminals.
 - a. Connect the I/O Module cable's M12 connector to the vision system's PWR connector.
 - b. Connect the I/O Module cable's DB15 connector to the I/O module's I/O connector.
 - c. Restore power to the 24VDC power supply and turn it on if necessary.

Connect the CIO-1400 I/O Expansion Module (Optional)

Note:

- When connected to the CIO-1400 I/O expansion module:
 - HS OUT 0 and HS OUT 1 are configurable as NPN (current sinking) with 50mA maximum current and the general-purpose outputs are configurable as NPN (current sinking) or PNP (current sourcing) with 100mA maximum current.
 - The vision system's IN 1, IN 2 / HS OUT 2, and IN 3 / HS OUT 3 lines are not supported.
- Perform wiring or adjustments to I/O devices when the vision system is not receiving power.

Connector/Indicator	Description
COMM OK LED (yellow)	Illuminates to indicate that the vision system and I/O module are communicating properly.
MODULE OK LED (yellow)	Illuminates after the I/O module has initialized and is ready to communicate with the vision system.
I/O and Trigger Status LEDs (yellow)	Illuminates to indicate when an input/output has switched ON.
SENSOR Port	Connects the I/O module to the vision system using the I/O Module cable, which provides power, trigger, I/O and RS-232 signals to the vision system.
RS232 OUT Port	Connects the I/O module to an RS-232 serial cable, which provides RS-232 communications between the I/O module and an external serial device.
Frame Ground Terminal	Connects the I/O module to a common frame ground.

1. Connect the I/O module's power wires.

CAUTION: Never connect the I/O module to a power source other than 24VDC. Any other voltage creates a risk of fire or shock and can damage the hardware. Do not connect the 24VDC power source to any terminals other than the 24VDC + and – power terminals.

- a. Verify that the 24VDC power supply is unplugged and not receiving power.
- b. Use a screwdriver to loosen the I/O module's power terminals (labeled 24VDC + and –).
- c. Insert the 24VDC + and – wires (16 - 26 AWG, solid or stranded wire) from the power supply into the 24VDC + and – terminals on the I/O module.
- d. Tighten the screw terminals with the screwdriver to secure the wire leads in the terminal block; the maximum torque is 0.4 Nm (3.5 in-lb).

2. Connect a frame ground wire to the I/O module's Frame Ground terminal. Connect the other end of the frame ground wire to frame ground.

CAUTION: The shield ground connections of the RS232 OUT port, SENSOR port and Frame Ground terminal are internally connected. The system grounding is designed to be at a zero ground potential; this zero ground potential extends through the cable and to peripheral equipment (e.g. a vision system, PLC, etc.). To ensure safe operating conditions, it is strongly recommended that all ground connections are checked to ensure that a zero ground potential is met.

3. Connect the I/O module's I/O wires.
 - a. Determine how I/O devices will be connected to the I/O module's input and output terminals.
 - b. To loosen the appropriate screw terminals, use a screwdriver.
 - c. Connect the input and output wires to the input and output terminals.
 - d. Connect the other end of the input and output wires to the corresponding I/O device.
 - e. Tighten the screw terminals with the screwdriver to secure the wire leads in the terminal block; the maximum torque is 0.4 Nm (3.5 in-lb).
4. To connect the vision system to a serial device, plug an RS-232 serial cable (DB9 male connector) into the I/O module's RS232 OUT port and connect the other end of the cable to the serial device. Tighten the connector screws to secure it to the I/O module.
5. Connect the I/O Module cable (CCB-PWRIO-MOD-xx) to the vision system.
 - a. Connect the I/O Module cable's M12 connector to the vision system's PWR connector.
 - b. Connect the I/O Module cable's DB15 connector to the I/O module's SENSOR port.
 - c. Restore power to the 24VDC power supply and turn it on if necessary.

Replace the SD Card (Optional)

The vision system is equipped with a Micro SD card slot and an 8GB SD card is pre-installed for saving job and image files. Complete the following steps to replace the pre-installed SD card.

Note: The vision system supports SD cards with a maximum capacity of 32GB, formatted with a FAT32 file system.

CAUTION:

- Hot-plugging the SD card is not supported and may damage the SD card and/or lead to unexpected behavior.
- !**
- IP67 protection requires that all cables are properly attached (or the provided connector plug installed), the IP67-rated lens cover is properly installed, and the Micro SD card cover is fastened in place.
 - Observe ESD precautions when installing or removing an SD card or other accessories.

1. Remove power from the vision system.
2. Unscrew the screws in the Micro SD card cover and open the card slot.
3. Remove the existing SD card from the Micro SD card slot.
4. Insert the new SD card into the Micro SD card slot, ensuring the card is properly oriented.
5. Replace the SD card cover, reinsert the screws and torque screws to 0.18 Nm (25 in-oz).

6. Restore power to the vision system.

Replace the LED Ring Light (Optional)

The illumination accessory (ISLM-7000-WHI) has a white LED ring light pre-installed. Complete the following steps to replace the pre-installed LED ring light.

CAUTION:

- Do not hot-plug the illumination accessory. Verify the vision system is not receiving power when connecting or disconnecting the illumination accessory. Failure to remove power during this procedure may result in damage to the vision system and/or the illumination accessory.
- Tighten all illumination accessory screws in the following sequence.

1. Remove power from the vision system.
2. Use a 2mm hex wrench to remove the four M3 x 12mm screws and remove the cover.

3. Remove the keyed light baffle.

Note: The following graphic includes an optional bandpass filter accessory installed to the light baffle. For more information, refer to [In-Sight Lenses, Lights and Covers on page 10](#).

4. The LED ring light screw holes are indicated by a triangle symbol ▶. Use a 2mm hex wrench to remove the four M2.5 x 6mm screws and remove the LED ring light from the light housing.

5. Install the new LED ring light.

CAUTION: Do not hot-plug the LED ring light. Verify the vision system is not receiving power when connecting or disconnecting the LED ring light.

- a. Place the new LED ring light inside the light housing, with "TOP" oriented upward.
- b. Insert the four M2.5 x 6mm screws into the screw holes indicated by a triangle symbol ►.
- c. Tighten the screws using a 2mm hex wrench; the maximum torque is 0.34 Nm (3 in-lb).

6. Install the light baffle.

- a. Tilt the light baffle toward the light housing and maneuver the light baffle past the top of the LED ring light structure.
- b. Compress the light baffle and maneuver the bottom of the light baffle past the bottom of the LED ring light structure until the light baffle snaps into place, with the keyed tabs sitting flush over each light housing captive screw access hole.

Note: The following graphic includes an optional bandpass filter accessory installed to the light baffle. For more information, refer to [In-Sight Lenses, Lights and Covers on page 10](#).

7. Install the cover.
 - a. Place the cover on the light housing.
 - b. Align the central clear region of the cover with the light baffle edges.
 - c. Insert the four M3 x 12mm screws and use a 2mm hex wrench to torque screws to 0.31 Nm (2.75 in-lb).

8. Restore power to the vision system.

Replace the M12 Autofocus Lens (Optional)

The autofocus accessory (ISAF-7000-8mm) has an 8mm M12 lens pre-installed. Complete the following steps to replace the pre-installed M12 lens.

Note: The In-Sight 7905 vision system does not support the ISAF-7000-8mm autofocus module or any accessories that require S-Mount/M12 lenses.

CAUTION:

- Do not hot-plug the illumination accessory. Verify the vision system is not receiving power when connecting or disconnecting the illumination accessory. Failure to remove power during this procedure may result in damage to the vision system and/or the illumination accessory.
- Tighten all illumination accessory screws in the following sequence.

- If the autofocus module is already installed to the vision system, you must first log onto the vision system using In-Sight Explorer software and reset the focus position to 0. Refer to the *In-Sight® Explorer Help* file for more information.
- Remove power from the vision system.
- Use a 2mm hex wrench to remove the four M3 x 12mm screws and remove the cover.

4. Remove the keyed light baffle.

Note: The following graphic includes an optional bandpass filter accessory installed to the light baffle. For more information, refer to [In-Sight Lenses, Lights and Covers on page 10](#).

5. The light housing contains four captive screws that are accessible via captive screw access holes in the LED ring light board. Use a 2mm hex wrench to loosen the four captive screws and remove the light housing.

CAUTION:

- Do not hot-plug the LED ring light. Verify the vision system is not receiving power when connecting or disconnecting the LED ring light.
- A connector protrudes from the underside of the light housing and can be damaged if placed on a hard surface.

6. Use a 1.5mm hex wrench to loosen the three captive screws in the autofocus module and remove the autofocus module from the vision system.

⚠ CAUTION: Do not hot-plug the autofocus module. Verify the vision system is not receiving power when connecting or disconnecting the autofocus module.

7. Remove the M12 lens from the autofocus module.
 - a. Remove the blue threaded lens nut on the underside of the autofocus module.

- b. Remove the M12 lens from the autofocus module.

8. Install the new M12 lens.

- a. An extra black lens nut is included with the lens toolkit accessory (ISAF-7000-TOOL). Thread this black lens nut on the new M12 lens until snug.

- b. Drop the new M12 lens into the module.

- c. Quarter-turn the thread of the lens clockwise, to ensure the lens is seated in the lens carrier.

- d. Once the lens is in the module, place the lens tool directly on the lens, with the padded end of the tool pressed against the lens.

- e. With the lens tool, apply just enough pressure on the front of the lens to prevent the lens from moving. With the chamfer side of the blue lens nut facing the module, screw the blue nut onto the back of the lens. Once the threads of the blue nut are engaged with the lens, remove the lens tool and continue threading the blue nut until it is snug against the focus mechanism. The lens nut should be tight enough that it does not fall off due to vibration.

⚠ CAUTION: Use light axial force on the lens tool when installing or removing the lens.

Chamfer Side of Blue Lens Nut:

9. Install the autofocus module.

⚠ CAUTION: Do not hot-plug the autofocus module. Verify the vision system is not receiving power when connecting or disconnecting the autofocus module.

- There are two alignment pins on the base of the autofocus module. Seat the pins into the vision system faceplate.
- There are three captive screws in the autofocus module. Partially thread the screws into the vision system faceplate using a 1.5mm hex wrench.
- Once threaded, torque the captive screws to 0.5 Nm (4.43 in-lb) using a torque screwdriver with a 1.5mm hex torque bit capable of reaching 15mm into a 2.5mm diameter hole. For example, Wiha Tools 1.5mm Hex Metric Torque Blade (SKU 28545) used with the Adjustable Torque Handle (SKU 28550).

10. Install the light housing.

CAUTION:

- Do not hot-plug the LED ring light. Verify the vision system is not receiving power when connecting or disconnecting the LED ring light.
- A connector protrudes from the underside of the light housing and can be damaged if placed on a hard surface.

Note: If a different LED color is required, refer to [Replace the LED Ring Light \(Optional\) on page 54](#).

- a. Place the light housing with LED ring light on top of the spacer, with “TOP” oriented upward.
- b. Verify seating of the gasket on the top of the spacer.
- c. There are four captive screw access holes near the white circles on the LED ring light. Use a 2mm hex wrench to torque the captive screws to 0.34 Nm (3 in-lb).

11. Install the light baffle.

Note: The following graphic includes an optional bandpass filter accessory installed to the light baffle. For more information, refer to [In-Sight Lenses, Lights and Covers on page 10](#).

- a. Tilt the light baffle toward the light housing and maneuver the light baffle past the top of the LED ring light structure.
- b. Compress the light baffle and maneuver the bottom of the light baffle past the bottom of the LED ring light structure until the light baffle snaps into place, with the keyed tabs sitting flush over each light housing captive screw access hole.

12. Install the cover.

- a. Place the cover on the light housing.
- b. Align the central clear region of the cover with the light baffle edges.
- c. Insert the four M3 x 12mm screws and use a 2mm hex wrench to torque screws to 0.31 Nm (2.75 in-lb).

13. Restore power to the vision system.

Remove the Illumination Accessory PCB

If the illumination accessory (ISLM-7000-WHI) must be uninstalled from the vision system, complete the following steps to safely remove the PCB and avoid damage to the vision system.

CAUTION: Do not hot-plug the illumination accessory. Verify the vision system is not receiving power when connecting or disconnecting the illumination accessory. Failure to remove power during this procedure may result in damage to the vision system and/or the illumination accessory.

1. Remove power from the vision system.
2. Use a 2mm hex wrench to remove the four spacer screws. Remove the spacer.

3. The vision system faceplate includes two lift points on either side of the PCB. Position an insulated extractor tool (for example, Jonard Tools S-340 DIP/IC Extractor) under the edges of the PCB.

- Once the extractor is engaged under the edges of the PCB, gently pull upward to disengage the PCB from the internal connector and remove the PCB.

- Verify the removal process did not damage mating components.

Specifications

The following sections list general specifications for the vision system.

7500 Series Vision System Specifications

Specifications	7500	7501
Minimum Firmware Requirement	In-Sight version 5.4.0	In-Sight version 5.5.0
Job/Program Memory	7.2GB non-volatile flash memory; unlimited storage via remote network device.	
Image Processing Memory	512MB SDRAM	
SD Card	1 Micro SD card slot with an 8GB SD card pre-installed for saving job and image files. The vision system supports SD cards with a maximum capacity of 32GB, formatted with a FAT32 file system.	
Sensor Type	1/1.8-inch CMOS, global shutter	
Sensor Properties	800 x 600: 4.5mm diagonal, 4.5 x 4.5 μ m sq. pixels	7.38mm diagonal, 4.5 x 4.5 μ m sq. pixels
	640 x 480: 3.6mm diagonal, 4.5 x 4.5 μ m sq. pixels	
Maximum Image Resolution (pixels) ¹	800 x 600 ²	1280 x 1024
	640 x 480	
Electronic Shutter Speed	800 x 600: 14 μ s to 550ms	17 μ s to 750ms
	640 x 480: 14 μ s to 520ms	
Acquisition	Rapid reset, progressive scan, full-frame integration.	
Bit Depth	256 grey levels (8 bits/pixel)	
Frames Per Second (FPS) ³	800 x 600: 165 FPS	76 FPS
	640 x 480: 217 FPS	
Lens Type	C-Mount or S-Mount/M12	
Trigger	1 opto-isolated, acquisition trigger input.	
Discrete Inputs	<ul style="list-style-type: none"> • 3 general-purpose inputs when connected to the Breakout cable.⁴ • 8 general-purpose inputs available when connected to the CIO-MICRO I/O Module via the I/O Module cable. • 7 general-purpose inputs available when connected to the CIO-1400 I/O Expansion Module via the I/O Module cable. 	

¹ You can configure the number of image sensor rows and set them in the In-Sight Explorer software. If you decrease the number of rows, it increases the frames per second acquired by the vision system. Refer to the AcquireImage topic in the *In-Sight® Explorer Help* file for more information.

² The default resolution is 800 x 600 pixels. The resolution can be configured as 640 x 480 pixels within the In-Sight Explorer software. For more information, see the *In-Sight® Explorer Help* file.

³ Maximum frames per second are job-dependent, based on the minimum exposure for a full image frame capture using the dedicated acquisition trigger, and assumes there is no user interface connection to the vision system.

⁴ When connected to the Breakout cable, the vision system allows for bi-directional, high-speed outputs and general-purpose inputs for HS OUT 2 / IN 2 and HS OUT 3 / IN 3. These lines are configured as outputs by default.

Specifications	7500	7501
Discrete Outputs	<ul style="list-style-type: none"> • 4 high-speed outputs when connected to the Breakout cable.¹ • 2 high-speed outputs, plus 8 general-purpose outputs available when connected to the CIO-MICRO I/O Module via the I/O Module cable. • 2 high-speed outputs, plus 6 general-purpose outputs available when connected to the CIO-1400 I/O Expansion Module via the I/O Module cable. 	
Status LEDs	SD Card Status, Pass/Fail LED and Indicator Ring, Network LED and Error LED.	
Internal LED Ring Light	White, Red, Blue or IR LED ring light used with the illumination accessory (ISLM-7000-xx). <ul style="list-style-type: none"> • White LED color temperature: 4000 K • Red LED wavelength: 617 nm • Blue LED wavelength: 455 nm • IR LED wavelength: 850 nm 	
	 Note: Refer to DataMan documentation for DataMan accessory specifications.	
In-Sight Illumination Accessory (ISLM-7000-xxx)	Cover is compliant with ANSI Z87.1-2003 Drop-Ball Impact Test (no fracture, 25.4mm diameter steel ball, vertical drop from 127cm).	
In-Sight Autofocus Accessory (ISAF-7000-8mm)	Number of Focus Cycles: 20,000	
Network Communication	1 Ethernet port, 10/100/1000 BaseT with auto MDIX. IEEE 802.3 TCP/IP Protocol. Supports DHCP, static and link-local IP address configuration.	
1588 Support	Timestamp Resolution: 8ns Synchronization Accuracy Through Transparent Clock: 5µs	
Serial Communication	RS-232C when connected to the Breakout cable ² or a compatible I/O module.	
Power Consumption	24VDC ±10%, 1.5A maximum.	
Power Output	24VDC @ 750mA maximum to external light.	
Material	Die-cast and extruded aluminum housing.	
Finish	Painted.	
Mounting	Four M3 threaded mounting holes. 1/4-20, M6 and flathead mounting holes also available on mounting bracket accessory (ISB-7000-7K). M4 mounting holes also available on mounting bracket accessory (ISB-7000-5K).	
Dimensions	<ul style="list-style-type: none"> • 35.7mm (1.41in) x 60.5mm (2.38in) x 90.1mm (3.55in). • 81.7mm (3.21in) x 60.5mm (2.38in) x 90.1mm (3.55in) with C-Mount cover accessory (COV-7000-CMNT). • 102.7mm (4.04in) x 60.5mm (2.38in) x 90.1mm (3.55in) with C-Mount cover accessory (COV-7000-CMNT-EX). • 77.5mm (3.05in) x 88.9mm (3.50in) x 97.2mm (3.83in) with Illumination accessory (ISLM-7000-xx). 	

¹ When connected to the Breakout cable, the vision system allows for bi-directional, high-speed outputs and general-purpose inputs for HS OUT 2 / IN 2 and HS OUT 3 / IN 3. These lines are configured as outputs by default.

² If hardware handshaking is required, an I/O module must be used.

Specifications	7500	7501
Weight	<ul style="list-style-type: none"> • Vision System with no accessories attached: 240 g (8.47 oz.) • C-Mount cover accessory (COV-7000-CMNT): 35 g (1.23 oz.) • C-Mount cover accessory (COV-7000-CMNT-EX): 43 g (1.52 oz.) • Autofocus Module Accessory (ISAF-7000-8mm): 121.5 g (4.29 oz.) • Illumination accessory (ISLM-7000-WHI): 153.5 g (5.41 oz.) 	
Case Temperature ¹	0°C to 50°C (32°F to 122°F)	
Storage Temperature	-20°C to 80°C (-4°F to 176°F)	
Humidity	< 80% non-condensing	
Protection	IP67 with all cables properly attached (or the provided connector plug installed), the IP67-rated cover properly installed, and the Micro SD card cover fastened in place.	
Shock (Shipping and Storage)	IEC 60068-2-27: 18 shocks (3 shocks in each polarity in each (X, Y, Z) axis) 80 Gs (800m/s ² at 11ms, half-sinusoidal) with cables or cable plugs and a 150 gram or lighter lens attached.	
Vibration (Shipping and Storage) ²	IEC 60068-2-6: vibration test in each of the three main axis for 2 hours @ 10 Gs (10 to 500 Hz at 100m/s ² / 15mm) with cables or cable plugs and a 150 gram or lighter lens attached.	
Regulations/Conformity	CE, FCC, KCC, TÜV SÜD NRTL, EU RoHS, China RoHS	

¹ To verify case temperature, use the EV GetSystemConfig("Internal.Temperature") Extended Native Mode command. When issued, it returns the vision system internal temperature in degrees Celsius, which is approximately 3 to 5 degrees above the vision system case temperature. For more information, see the *In-Sight® Explorer Help* file. A thermal scanner can also be used to determine the vision system case temperature. Additional cooling measures are required if the case temperature cannot be kept below 50°C. Examples of such measures include: extra heat sinking and/or air movement.

² Before you ship this product or any machinery that contains it, remove lenses that weigh more than 150 grams.

7600 Series Vision System Specifications

Specifications	7600	7600C
Minimum Firmware Requirement	In-Sight version 5.4.0	In-Sight version 5.5.0
Job/Program Memory	7.2GB non-volatile flash memory; unlimited storage via remote network device.	
Image Processing Memory	512MB SDRAM	
SD Card	1 Micro SD card slot with an 8GB SD card pre-installed for saving job and image files. The vision system supports SD cards with a maximum capacity of 32GB, formatted with a FAT32 file system.

⁵ When connected to the Breakout cable, the vision system allows for bi-directional, high-speed outputs and general-purpose inputs for HS OUT 2 / IN 2 and HS OUT 3 / IN 3. These lines are configured as outputs by default.

Specifications	7600	7600C
Status LEDs	SD Card Status, Pass/Fail LED and Indicator Ring, Network LED and Error LED.	
Internal LED Ring Light	White, Red, Blue or IR LED ring light used with the illumination accessory (ISLM-7000-xx). <ul style="list-style-type: none"> • White LED color temperature: 4000 K • Red LED wavelength: 617 nm • Blue LED wavelength: 455 nm • IR LED wavelength: 850 nm 	
	Note: <ul style="list-style-type: none"> • For color vision systems, the white LED ring light should be used. • Refer to DataMan documentation for DataMan accessory specifications. 	
In-Sight Illumination Accessory (ISLM-7000-xxx)	Cover is compliant with ANSI Z87.1-2003 Drop-Ball Impact Test (no fracture, 25.4mm diameter steel ball, vertical drop from 127cm).	
In-Sight Autofocus Accessory (ISAF-7000-8mm)	Number of Focus Cycles: 20,000	
Network Communication	1 Ethernet port, 10/100/1000 BaseT with auto MDIX. IEEE 802.3 TCP/IP Protocol. Supports DHCP, static and link-local IP address configuration.	
1588 Support	Timestamp Resolution: 8ns Synchronization Accuracy Through Transparent Clock: 5µs	
Serial Communication	RS-232C when connected to the Breakout cable ¹ or a compatible I/O module.	
Power Consumption	24VDC ±10%, 1.5A maximum.	
Power Output	24VDC @ 750mA maximum to external light.	
Material	Die-cast and extruded aluminum housing.	
Finish	Painted.	
Mounting	Four M3 threaded mounting holes. 1/4-20, M6 and flathead mounting holes also available on mounting bracket accessory (ISB-7000-7K). M4 mounting holes also available on mounting bracket accessory (ISB-7000-5K).	
Dimensions	<ul style="list-style-type: none"> • 35.7mm (1.41in) x 60.5mm (2.38in) x 90.1mm (3.55in). • 81.7mm (3.21in) x 60.5mm (2.38in) x 90.1mm (3.55in) with C-Mount cover accessory (COV-7000-CMNT). • 102.7mm (4.04in) x 60.5mm (2.38in) x 90.1mm (3.55in) with C-Mount cover accessory (COV-7000-CMNT-EX). • 77.5mm (3.05in) x 88.9mm (3.50in) x 97.2mm (3.83in) with Illumination accessory (ISLM-7000-xx). 	
Weight	<ul style="list-style-type: none"> • Vision System with no accessories attached: 240 g (8.47 oz.) • C-Mount cover accessory (COV-7000-CMNT): 35 g (1.23 oz.) • C-Mount cover accessory (COV-7000-CMNT-EX): 43 g (1.52 oz.) • Autofocus Module Accessory (ISAF-7000-8mm): 121.5 g (4.29 oz.) • Illumination accessory (ISLM-7000-WHI): 153.5 g (5.41 oz.) 	

¹ If hardware handshaking is required, an I/O module must be used.

Specifications	7600	7600C
Case Temperature ¹	0°C to 50°C (32°F to 122°F)	
Storage Temperature	-20°C to 80°C (-4°F to 176°F)	
Humidity	< 80% non-condensing	
Protection	IP67 with all cables properly attached (or the provided connector plug installed), the IP67-rated cover properly installed, and the Micro SD card cover fastened in place.	
Shock (Shipping and Storage)	IEC 60068-2-27: 18 shocks (3 shocks in each polarity in each (X, Y, Z) axis) 80 Gs (800m/s ² at 11ms, half-sinusoidal) with cables or cable plugs and a 150 gram or lighter lens attached.	
Vibration (Shipping and Storage) ²	IEC 60068-2-6: vibration test in each of the three main axis for 2 hours @ 10 Gs (10 to 500 Hz at 100m/s ² / 15mm) with cables or cable plugs and a 150 gram or lighter lens attached.	
Regulations/Conformity	CE, FCC, KCC, TÜV SÜD NRTL, EU RoHS, China RoHS	

¹ To verify case temperature, use the EV GetSystemConfig("Internal.Temperature") Extended Native Mode command. When issued, it returns the vision system internal temperature in degrees Celsius, which is approximately 3 to 5 degrees above the vision system case temperature. For more information, see the *In-Sight® Explorer Help* file. A thermal scanner can also be used to determine the vision system case temperature. Additional cooling measures are required if the case temperature cannot be kept below 50°C. Examples of such measures include: extra heat sinking and/or air movement.

² Before you ship this product or any machinery that contains it, remove lenses that weigh more than 150 grams.

7800 Series Vision System Specifications

Specifications	7800	7800C	7801	7801C	7802	7802C
Minimum Firmware Requirement	In-Sight version 5.4.0	In-Sight version 5.5.0	In-Sight version 5.4.0	In-Sight version 5.5.0	In-Sight version 5.4.0	In-Sight version 5.5.0
Job/Program Memory	7.2GB non-volatile flash memory; unlimited storage via remote network device.					
Image Processing Memory	512MB SDRAM					
SD Card	1 Micro SD card slot with an 8GB SD card pre-installed for saving job and image files. The vision system supports SD cards with a maximum capacity of 32GB, formatted with a FAT32 file system.					
Sensor Type	1/1.8-inch CMOS, global shutter					
Sensor Properties	800 x 600: 4.5mm diagonal, 4.5 x 4.5µm sq. pixels		7.38mm diagonal, 4.5 x 4.5µm sq. pixels		1600 x 1200: 9mm diagonal, 4.5 x 4.5µm sq. pixels	
	640 x 480: 3.6mm diagonal, 4.5 x 4.5µm sq. pixels				800 x 600: 9mm diagonal, 4.5 x 4.5µm sq. pixels	
Maximum Image Resolution (pixels) ¹	800 x 600 ²		1280 x 1024		1600 x 1200 ³	
	640 x 480				800 x 600 (Low Light Mode)	
Electronic Shutter Speed	800 x 600: 14µs to 550ms		17µs to 750ms		1600 x 1200: 20µs to 940ms	
	640 x 480: 14µs to 520ms				800 x 600 (Low Light Mode): 20µs to 940ms	
Acquisition	Rapid reset, progressive scan, full-frame integration.					
Bit Depth	256 grey levels (8 bits/pixel)	24-bit color	256 grey levels (8 bits/pixel)	24-bit color	256 grey levels (8 bits/pixel)	24-bit color
Frames Per Second (FPS) ⁴	800 x 600: 165 FPS	800 x 600: 100 FPS	76 FPS	45 FPS	1600 x 1200: 53 FPS	1600 x 1200: 33 FPS
	640 x 480: 217 FPS	640 x 480: 135 FPS			800 x 600 (Low Light Mode): 53 FPS	800 x 600 (Low Light Mode): 45 FPS
Lens Type	C-Mount or S-Mount/M12					
Trigger	1 opto-isolated, acquisition trigger input.					

¹ You can configure the number of image sensor rows and set them in the In-Sight Explorer software. If you decrease the number of rows, it increases the frames per second acquired by the vision system. Refer to the AcquireImage topic in the *In-Sight® Explorer Help* file for more information.

² The default resolution is 800 x 600 pixels. The resolution can be configured as 640 x 480 pixels within the In-Sight Explorer software. For more information, see the *In-Sight® Explorer Help* file.

³ The default resolution is 1600 x 1200 pixels. The resolution can be configured as 800 x 600 (Low Light Mode) within the In-Sight Explorer software. When using 800 x 600 (Low Light Mode), it provides increased light sensitivity at a reduced resolution. For more information, see the *In-Sight® Explorer Help* file.

⁴ Maximum frames per second are job-dependent, based on the minimum exposure for a full image frame capture using the dedicated acquisition trigger, and assumes there is no user interface connection to the vision system.

Specifications	7800	7800C	7801	7801C	7802	7802C
Discrete Inputs	<ul style="list-style-type: none"> • 3 general-purpose inputs when connected to the Breakout cable.¹ • 8 general-purpose inputs available when connected to the CIO-MICRO I/O Module via the I/O Module cable. • 7 general-purpose inputs available when connected to the CIO-1400 I/O Expansion Module via the I/O Module cable. 					
Discrete Outputs	<ul style="list-style-type: none"> • 4 high-speed outputs when connected to the Breakout cable.² • 2 high-speed outputs, plus 8 general-purpose outputs available when connected to the CIO-MICRO I/O Module via the I/O Module cable. • 2 high-speed outputs, plus 6 general-purpose outputs available when connected to the CIO-1400 I/O Expansion Module via the I/O Module cable.

Specifications	7902P	7905	7905C
Internal LED Ring Light	White, Red, Blue or IR LED ring light used with the illumination accessory (ISLM-7000-xx). <ul style="list-style-type: none"> • White LED color temperature: 4000 K • Red LED wavelength: 617 nm • Blue LED wavelength: 455 nm • IR LED wavelength: 850 nm 		
	Note: For color vision systems, the white LED ring light should be used.		
In-Sight Illumination Accessory (ISLM-7000-xxx)	Cover is compliant with ANSI Z87.1-2003 Drop-Ball Impact Test (no fracture, 25.4mm diameter steel ball, vertical drop from 127cm).		
In-Sight Autofocus Accessory (ISAF-7000-8mm)	Number of Focus Cycles: 20,000	Not supported.	
Network Communication	1 Ethernet port, 10/100/1000 BaseT with auto MDIX. IEEE 802.3 TCP/IP Protocol. Supports DHCP, static and link-local IP address configuration.		
1588 Support	Timestamp Resolution: 8ns Synchronization Accuracy Through Transparent Clock: 5µs		
Serial Communication	RS-232C when connected to the Breakout cable ¹ or a compatible I/O module.		
Power Consumption	24VDC ±10%, 1.5A maximum.		
Power Output	24VDC @ 750mA maximum to external light.		
Material	Die-cast and extruded aluminum housing.		
Finish	Painted.		
Mounting	Four M3 threaded mounting holes. 1/4-20, M6 and flathead mounting holes also available on mounting bracket accessory (ISB-7000-7K). M4 mounting holes also available on mounting bracket accessory (ISB-7000-5K).		
Dimensions	<ul style="list-style-type: none"> • 49.4mm (1.94in) x 60.5mm (2.38in) x 90.1mm (3.55in). • 95.3mm (3.21in) x 60.5mm (2.38in) x 90.1mm (3.55in) with C-Mount cover accessory (COV-7000-CMNT). • 116.3mm (4.58in) x 60.5mm (2.38in) x 90.1mm (3.55in) with C-Mount cover accessory (COV-7000-CMNT-EX). • 131.7 (5.19in) x 68.0 (2.68in) x 90.1mm (3.55in) with C-Mount cover accessory (COV-7000-CMNT-LG). • 161.7 (6.37in) x 68.0 (2.68in) x 90.1mm (3.55in) with C-Mount cover accessory (COV-7000-CMNT-LG) and C-Mount cover extender accessory (COV-7000-CMNT-LGX). • 91.1mm (3.59in) x 88.9mm (3.50in) x 97.2mm (3.83in) with illumination accessory (ISLM-7000-xx). 		

¹ If hardware handshaking is required, an I/O module must be used.

Specifications	7902P	7905	7905C
Weight	<ul style="list-style-type: none"> • Vision System with no accessories attached: 300 g (10.58 oz.) • C-Mount cover accessory (COV-7000-CMNT): 35 g (1.23 oz.) • C-Mount cover accessory (COV-7000-CMNT-EX): 43 g (1.52 oz.) • C-Mount cover accessory (COV-7000-CMNT-LG): 75.9 g (2.68 oz.) • C-Mount cover extender accessory (COV-7000-CMNT-LGX): 25.0 g (0.88 oz.) • 7902P only: Autofocus Module Accessory (ISAF-7000-8mm): 121.5 g (4.29 oz.) • Illumination accessory (ISLM-7000-WHI): 153.5 g (5.41 oz.) 		
Case Temperature ¹	0°C to 50°C (32°F to 122°F)		
Storage Temperature	-20°C to 80°C (-4°F to 176°F)		
Humidity	< 80% non-condensing		
Protection	IP67 with all cables properly attached (or the provided connector plug installed), the IP67-rated cover properly installed, and the Micro SD card cover fastened in place.		
Shock (Shipping and Storage)	IEC 60068-2-27: 18 shocks (3 shocks in each polarity in each (X, Y, Z) axis) 80 Gs (800m/s ² at 11ms, half-sinusoidal) with cables or cable plugs and a 150 gram or lighter lens attached.		
Vibration (Shipping and Storage) ²	IEC 60068-2-6: vibration test in each of the three main axis for 2 hours @ 10 Gs (10 to 500 Hz at 100m/s ² / 15mm) with cables or cable plugs and a 150 gram or lighter lens attached.		
Regulations/Conformity	CE, FCC, KCC, TÜV SÜD NRTL, EU RoHS, China RoHS		

¹ To verify case temperature, use the EV GetSystemConfig("Internal.Temperature") Extended Native Mode command. When issued, it returns the vision system internal temperature in degrees Celsius, which is approximately 3 to 5 degrees above the vision system case temperature. For more information, see the *In-Sight® Explorer Help* file. A thermal scanner can also be used to determine the vision system case temperature. Additional cooling measures are required if the case temperature cannot be kept below 50°C. Examples of such measures include: extra heat sinking and/or air movement.

² Before you ship this product or any machinery that contains it, remove lenses that weigh more than 150 grams.

Acquisition Trigger Input

The vision system features one acquisition trigger input, which is optically isolated. You can configure the acquisition trigger input to trigger from an NPN (current sinking) or PNP (current sourcing) device.

Specification	Description
Voltage	ON: 15 to 28V DC (24VDC nominal) OFF: 0 to 5VDC (11.5VDC nominal threshold)
Current (Typical)	ON: 2.6mA to 4.9mA from 15 to 28V input OFF: < 830 μ A for < 5VDC input Resistance: ~6 kOhms
Delay	190 μ s maximum latency between leading edge of trigger and start of acquisition. Input pulse should be a minimum of 1ms wide.

- To trigger from an NPN type photoelectric sensor or PLC output, connect COMMON IN to +24VDC and connect TRIGGER to the output of the photoelectric sensor. When the output turns ON, it pulls TRIGGER down to 0VDC, turning the opto-coupler ON. For more information, refer to [Breakout Cable on page 90](#).
- To trigger from a PNP photoelectric sensor or PLC output, connect TRIGGER to the output of the photoelectric sensor and connect COMMON IN to 0VDC. When the output turns ON, it pulls TRIGGER up to +24VDC, turning the opto-coupler ON. For more information, refer to [Breakout Cable on page 90](#).

26.4V Max. across input pins - Transition approximately 12V (Min.)

General-Purpose Inputs

The vision system features three¹ built-in general-purpose inputs, which are optically isolated. The inputs can be configured as either NPN (current sinking) or PNP (current sourcing) lines.

Specification	Description
Voltage	ON: 15 to 28V DC (24VDC nominal) OFF: 0 to 5VDC (11.5VDC nominal threshold)
Current (Typical)	ON: 2.6mA to 4.9mA from 15 to 28V input OFF: < 830µA for < 5VDC input Resistance: ~6 kOhms
Delay	1.11ms maximum latency between leading edge of trigger and start of acquisition. Input pulse should be a minimum of 1ms wide.

- For NPN lines, connect COMMON IN to +24VDC and connect IN 1 to the output of the photoelectric sensor or PLC. When the output turns ON, it pulls IN 1 down to 0VDC, turning the opto-coupler ON.
- For PNP lines, connect IN 1 to the output of the detector and connect COMMON IN to 0VDC. When the output turns ON, it pulls IN 1 up to +24VDC, turning the opto-coupler ON.

26.4V Max. across input pins - Transition approximately 12V (Min.)

¹When connected to the Breakout cable, the vision system allows for bi-directional, high-speed outputs and general-purpose inputs for HS OUT 2 / IN 2 and HS OUT 3 / IN 3. These lines are configured as outputs by default.

High-Speed Outputs

The vision system features four¹ built-in, high-speed outputs, which are optically isolated. The high-speed outputs can be used as either NPN (current sinking) or PNP (current sourcing) lines.

Specification	Description
Voltage	26.4VDC maximum through external load
Current	50mA maximum sink or source current
	OFF state leakage current 100µA
	External load resistance 470 Ohms to 10K Ohms
	Each line rated at a maximum 50mA, protected against over-current, short circuits and transients from switching inductive loads. High current inductive loads require an external protection diode.
Delay ²	25µs (maximum due to opto-isolators turning ON).

For NPN lines, the external load should be connected between the output and the positive supply voltage (<26.4VDC). The output pulls down to less than 3VDC when ON, which causes current to flow through the load. When the output is OFF, no current flows through the load.

For PNP lines, the external load should be connected between the output and the negative supply voltage (0VDC). When connected to a 24VDC power supply, the output pulls up greater than 21VDC when ON, and current flows through the load. When the output is OFF, no current flows through the load.

¹ When connected to the Breakout cable, the vision system allows for bi-directional, high-speed outputs and general-purpose inputs for HS OUT 2 / IN 2 and HS OUT 3 / IN 3. These lines are configured as outputs by default.

² Delay when opto-isolators turn OFF depends on the load to which the output is connected. With a 470 Ohm load, the maximum delay will be 200µs.

High-Speed Output Wiring

To connect to an NPN-compatible PLC input, connect one of the vision system's high-speed outputs directly to the PLC input. When enabled, the output pulls the PLC input down to less than 3VDC.

To connect to a PNP-compatible PLC input, connect one of the vision system's high-speed outputs directly to the PLC input. When enabled, the output pulls the PLC input up to greater than 21VDC.

To connect the high-speed outputs to a relay, LED or similar load, connect the negative side of the load to the output and the positive side to +24VDC. When the output switches on, the negative side of the load is pulled down to less than 3VDC, and 24VDC appears across the load. Use a protection diode for a large inductive load, with the anode connected to the output and the cathode connected to +24VDC.

External Light Connector

The vision system's LIGHT connector is used to connect the External Light cable to an external lighting device, providing power and strobe control. The External Light cable can be connected to either a continuous or strobed lighting device. Before using an external lighting device, you must configure the light settings within In-Sight Explorer. For more information, refer to the Light Settings topic in the *In-Sight® Explorer Help* file.

Pin#	Signal Name	Wire Color
1	+24VDC	Brown
2	Intensity Control	White
3	GND	Blue
4	Strobe	Black
5	Chassis	Not Connected

Note:

- Cables are sold separately.
 - The External Light cables with the following product IDs do not support intensity control: CCB-M12LTF-xx, IVSL-M12-NSB-300, IVSL-M12-NSB-1000 and IVSL-M12-NSB-2000. If intensity control is required, use External Light cables with the following product IDs: IVSL-5PM12-J300, IVSL-5PM12-J500, IVSL-5PM12-J1000 and IVSL-5PM12-J2000.
- ⓘ
- Current load: 750 mA maximum. Only the +24VDC pin is capable of sourcing 750mA.
 - Intensity Control is an analog signal that ranges from 0 to +10VDC, and is configurable within In-Sight Explorer. It is a control signal only, and must not be used to power an external device. Power should be sourced from +24VDC and GND.
 - The Strobe output is active low 0VDC and active high +12VDC, with the Polarity configurable within In-Sight Explorer. It is a control signal only and may not to be used for power. Power should be sourced from +24VDC and GND.

Ethernet Cable

The Ethernet cable provides Ethernet connectivity to the vision system.

P1 Pin Number	Wire Color	Signal Name	P2 Pin Number
1	White/Orange	TxRx A +	1
2	Orange	TxRx A -	2
3	White/Green	TxRx B +	3
4	Blue	TxRx C +	8
5	White/Blue	TxRx C -	7
6	Green	TxRx B -	4
7	White/Brown	TxRx D +	5
8	Brown	TxRx D -	6

CAUTION: The Ethernet cable shield must be grounded at the far end. Whatever this cable is plugged into (typically a switch or router) should have a grounded Ethernet connector. A digital voltmeter should be used to validate the grounding. If the far end device is not grounded, a ground wire should be added in compliance with local electrical codes.

Note:

- Cables are sold separately.
- The wiring for this cable follows standard industrial Ethernet M12 specifications. It differs from the 568B standard.

Breakout Cable

The Breakout cable provides connections to an external power supply, the acquisition trigger input, general-purpose inputs, high-speed outputs, and RS-232 serial communications. The Breakout cable is not terminated.

Pin#	Signal Names	Wire Color
1	IN 2 / HS OUT 2	Yellow
2	RS-232 TRANSMIT	White/Yellow
3	RS-232 RECEIVE	Brown
4	IN 3 / HS OUT 3	White/Brown
5	IN 1	Violet
6	COMMON IN	White/Violet
7	+24VDC	Red
8	GND	Black
9	COMMON OUT	Green
10	TRIGGER	Orange
11	HS OUT 0	Blue
12	HS OUT 1	Grey

Note:

- Cables are sold separately.
- You can cut exposed wires short or trim wire ends. You also can tie the wires back if you use a tie made of non-conductive material. Keep bare wires separated from the +24VDC wire.
- When using the 15 meter Breakout cable, full 24VDC voltage must be maintained at the input leads of the Breakout cable when the vision system is operating.
- If hardware handshaking is required for serial communication, an I/O module must be used.
- Perform wiring or adjustments to I/O devices when the vision system is not receiving power.

I/O Module Cable

The I/O Module cable connects the vision system directly to a compatible I/O module via the DB15 connector. When the I/O module is used, all power and communication lines used by the vision system are connected using the I/O Module cable.

P1 Pin#	Signal Name	Wire Color	Signal Name	P2 Pin#
1	IN 2 / HS OUT 2	Yellow	Not Used	Not Used
2	RS-232 TRANSMIT	White/Yellow	RS-232 RECEIVE	7
3	RS-232 RECEIVE	Brown	RS-232 TRANSMIT	6
4	IN 3 / HS OUT 3	White/Brown	Not Used	Not Used
5	IN 1	Violet	Not Used	Not Used
6	COMMON IN	White/Violet	TRIGGER-	3
7	+24VDC	Red	+24VDC	1
8	GND	Black	-24VDC	8
9	COMMON OUT	Green	-24VDC	8
10	TRIGGER	Orange	TRIGGER+	2
11	HS OUT 0	Blue	HS OUT 0	4
12	HS OUT 1	Grey	HS OUT 1	5

Note: Cables are sold separately.

Dimensions

The following sections list dimensions of the vision system and optional accessories.

7500/7600/7800 Series & 7900/7901/7902 Vision System

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7500/7600/7800 Series & 7900/7901/7902 Vision System with Cover (COV-7000-CMNT)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7500/7600/7800 Series & 7900/7901/7902 Vision System with Cover (COV-7000-CMNT-EX)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7500/7600/7800 Series & 7900/7901/7902 Vision System with Illumination (ISLM-7000-xx)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7902P/7905 Vision System

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7902P/7905 Vision System with Cover (COV-7000-CMNT)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7902P/7905 Vision System with Cover (COV-7000-CMNT-EX)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7902P/7905 Vision System with Cover (COV-7000-CMNT-LG)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7902P/7905 Vision System with Cover (COV-7000-CMNT-LG) and Extender (COV-7000-CMNT-LGX)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

7902P/7905 Vision System with Illumination (ISLM-7000-xx)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

Mounting Bracket (ISB-7000-7K)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

Mounting Bracket (ISB-7000-5K)

Note:

- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

C-Mount Lens Clearance Dimensions

Note:

- When using a C-Mount lens, the following restrictions apply:
 - Maximum thread length is 5.25mm.
 - The C-Mount lens threads and body cannot protrude more than 6.5mm in length into the vision system when screwed in unless the diameter of the back lens is smaller than 14.75mm. If the C-Mount lens threads and body protrude more than 6.5mm, you can add a spacer between the lens and vision system. However, the spacer decreases the working distance.
- Dimensions are in millimeters [inches] and are for reference purposes only.
- All specifications are for reference purposes only and can change without notice.

Cleaning/Maintenance

Clean the Housing

To clean the outside of the vision system housing, use a small amount of mild detergent cleaner or isopropyl alcohol on a cleaning cloth. Do not pour the cleaner on the vision system housing.

 **CAUTION:** Do not attempt to clean any In-Sight product with harsh or corrosive solvents, including lye, methyl ethyl ketone (MEK) or gasoline.

Clean the Image Sensor Window

To remove dust from the outside of the image sensor window, use a pressurized air duster. The air must be free of oil, moisture or other contaminants that could remain on the glass and possibly degrade the image. Do not touch the glass window. If oil or smudges remain, use a cotton bud and alcohol (ethyl, methyl, or isopropyl) to clean the window. Do not pour the alcohol on the window.

Clean the Cover

To remove dust from the lens cover, use a pressurized air duster. The air must be free of oil, moisture or other contaminants that could remain on the lens cover. To clean the plastic window of the lens cover, use a small amount of isopropyl alcohol on a cleaning cloth. Do not scratch the plastic window. Do not pour the alcohol on the plastic window.
